SOFTWARE ENGINEER · QUANTITATIVE FINANCE

PROFILE

Software engineer with 6+ years of experience building production applications, financial data systems, APIs and cloud products across international teams. Hands-on experience in derivatives pricing, forecasting, simulation, time-series modelling and systematic investing. Combines strong Python, C++ and data engineering skills with the ability to turn quantitative ideas into reliable, maintainable software.

CORE EXPERTISE

Languages: Python · C++ · JavaScript/TypeScript · SQL

Quantitative: Quantitative research · derivatives pricing · stochastic models · Monte Carlo simulation · calibration · time series · backtesting · machine learning · deep learning

Engineering: Django · REST/GraphQL APIs · PostgreSQL · data pipelines · AWS/Azure · Git · CI/CD · NodeJS · React/Next.js · React Native · Flutter · Vue · Angular

Python / Data: NumPy · pandas · SciPy · scikit-learn · statsmodels · Jupyter

SELECTED QUANTITATIVE WORK

Derivatives Pricing and Stochastic Models | Python · NumPy · SciPy

- Calibrated Heston and Bates models using Lewis and Carr-Madan methods, priced path-dependent and jump-diffusion options with Monte Carlo simulation, and compared the results using pricing-error diagnostics.

Deep Learning for Multi-Asset Forecasting | MLP · LSTM · CNN-GAF

- Modelled 25-day returns across SPY, TLT, SHY, GLD and DBO. Used chronological splits, walk-forward validation and label purging before evaluating the models through backtests.

Market Regimes and Interest Rates | HMM · CIR · Time Series

- Built and backtested regime-aware allocations across SPY, GLD and TLT using 5,405 VIX observations. In a separate project, calibrated CIR to 12-month Euribor and simulated 100,000 one-year short-rate paths.

PROFESSIONAL EXPERIENCE

Software Engineer · TAPP Engine *May 2026 – Present*

USA · Remote

- Drove customer-facing financial applications from pre-release to production, resolving critical reliability and . integration issues while managing releases across the App Store and Google Play.
- Build secure, white-label RIA infrastructure spanning cash management, asset management and brokerage, working across international teams to deliver reliable financial workflows and production-ready integrations.

Full-stack Engineer · FigureFlow *Aug 2025 – Aug 2026*

Sweden · Remote

- Built backend and data workflows in Django for financial statements, annual reports, chart-of-accounts, analytics and forecasting within a CFO platform.
- Integrated banking data and developed processing pipelines and LLM-assisted tools used for reporting, forecasting and CFO decision support.

Frontend Engineer · Eze Wholesales *Feb 2023 – Aug 2025*

United States · Remote

- Built core onboarding, invoicing, checkout, enterprise and administrative workflows for a global electronics marketplace.
- Led internationalisation across 4+ languages and currencies and improved frontend performance by 35% by simplifying UI and asynchronous data flows.

Senior Full-stack Engineer · Enclave Studios *Feb 2025 – Jul 2025*

Hong Kong · Remote

- Delivered full-stack features for four client engagements, taking work from early requirements through implementation and release.
- Contributed to technical decisions, code reviews and reliable delivery across luxury e-commerce, fitness and digital portfolio products.

Team Lead Mobile Engineer · TechBeaver *Mar 2022 – Mar 2024*

Nigeria · Remote

- Led mobile delivery across healthcare, fintech and food-service products, helping the team work through technical decisions and implementation challenges.
- Shipped three iOS and Android applications with React Native and Flutter and introduced reusable patterns that made future development more consistent.

OTHER EXPERIENCE

Full-stack Engineer, Easyshare Global · Dec 2024 – Jun 2025 | Senior Mobile Developer, Optimus AI Labs · Sep 2024 – Dec 2024

EDUCATION

MSc Financial Engineering · WorldQuant University *Expected 2027*

BSc Computer Science · Miva Open University *2026*

BSc Marine Biology · University of Lagos *2024*
